research,
development
and innovation

Soilcure ENDO™ is an ecofriendly liquid microbial amendment that combines beneficial Bacillus bacteria and mycorrhizal fungi

Soilcure ENDO™ Applications

Agriculture -

Commodities, Vegetables, Trees,
Nuts, Turf

Hydroponics

Horticulture

Seed Treatments

Arbory & Landscape

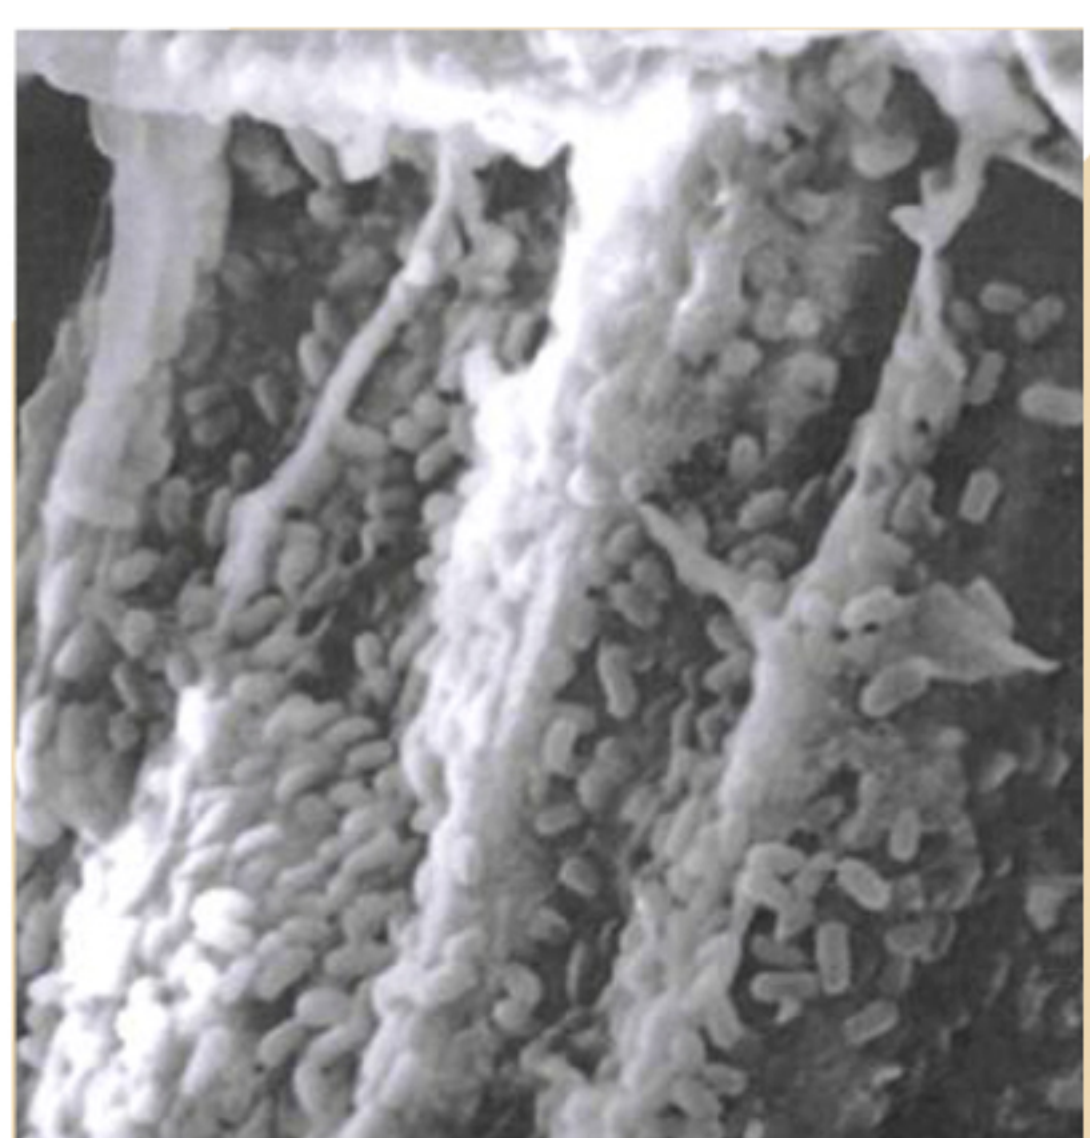

Forestry

Erosion Control & Restoration

Superior Nutrient Cycling

Mycorrhizal Fungi

Healthy Bacteria

Soilcure
ENDO™

LIQUID BIOLOGICAL AMENDMENT

See for yourself how
Soilcure ENDO™ gets
results!

SoilCure ENDO™

Control

Stronger Roots

- Promotes growth of healthier plants
- Increases crop yield and quality
- Utilizes the synergistic effects of a consortium of plant growth-promoting beneficial bacteria
- Solubilizes nutrients in organic form, increasing plant availability and uptake
- Promotes soil health
- Organic Materials Review Institute (OMRI®) listed
- Allows reduced reliance on other agricultural inputs, such as chemical fertilizers
- Restores beneficial soil microorganisms following herbicide or fungicide use
- Environmentally sound: non-toxic and no harmful runoff
- Provides essential components of sustainable and regenerative farming
- Mobilizes soil minerals otherwise unavailable to plant roots
- Enables uptake of nutrients from outside the plant rhizosphere
